

KAMYAR HOVEISHI

Enterprise Software Engineer | AI-Assisted Software Engineering | Program Comprehension

Tehran, Iran | ka.hoveishi@gmail.com | github.com/kkeepscodin/opensap-copilot

RESEARCH PROFILE

Research direction: trustworthy AI-assisted software engineering for legacy and enterprise systems, with emphasis on program comprehension, evidence-grounded language models, static program evidence, software maintenance, and empirical evaluation. Professional work centers on understanding complex production systems before changing them and turning that understanding into simpler, measurable solutions.

EDUCATION

B.Sc. Computer Engineering (Hardware) — Islamic Azad University, West Tehran Branch, Tehran, Iran | Jan 2019

- Official CGPA: 14.47/20 across 145 credits. Weighted average over the most recent 60 credits: 15.31/20, calculated directly from the official transcript.
- Undergraduate thesis: “Voice over Internet Protocol” — Supervisor: Dr. Afshin Moraveji.
- Selected grades: Fundamentals of Computer and Programming 19/20; Digital Electronics 17/20; Mathematics II 17/20; VLSI Systems Design 16.5/20; Linear Control Systems 16.5/20.

PROFESSIONAL EXPERIENCE

SAP ABAP Developer / Software Engineer — Iran Khodro Industrial Group, Tehran, Iran | Nov 2023–Present

- Develop and debug production ABAP solutions across SAP PS, MM, CO, and SD using CDS views, BAPIs, enhancements/BAdIs, ALV/SALV, Dynpro, REST/JSON integrations, and production root-cause analysis.
- Re-engineered a production reporting workflow from approximately 40 minutes to under 10 seconds by restructuring data retrieval around CDS views and focused ABAP processing.
- Built and maintained executive management analytics in an enterprise data environment exceeding 13 billion records, designed for practical seconds-level interaction.
- Implemented SAP Project System integration services for external applications, including WBS elements, networks, and activities through SAP APIs and REST/JSON interfaces.
- Translated stakeholder requirements into procurement and financial analytics logic, including CDS-based modeling and production validation.

AI & Data Science Specialist (Part-Time) — Abroadin | May 2021–Sep 2023

- Worked on applied data analysis and machine-learning tasks and researched technologies relevant to product and platform improvements.

SELECTED RESEARCH & ENGINEERING PROJECT

OpenSAP Copilot — Evidence-Grounded Program Comprehension | 2026

- Open-source prototype for legacy ABAP comprehension that extracts deterministic source-code evidence before optional local-LLM enrichment, keeping factual program evidence separate from model interpretation.
- Implements evidence allowlisting, explicit uncertainty, structured output, and a grounding guard that blocks unsupported business-scenario claims.
- Includes a reproducible three-program MVP evaluation harness; the current release passes 21/21 designed internal checks. This is an internal MVP evaluation, not a published benchmark.
- Research question: whether hybrid static extraction + LLM explanation can improve the factual accuracy and trustworthiness of legacy-program comprehension compared with LLM-only analysis.

TEACHING EXPERIENCE

- Teaching Assistant — Fundamentals of Computer and Programming, Fall 2015; course instructor: Dr. Mohammadjavad Khoshroo.
- Teaching Assistant — Digital Electronics, Spring 2018; course instructor: Dr. Ali Mansour.

TECHNICAL SKILLS

Software / Enterprise: SAP ABAP, CDS Views, Open SQL, BAPI, REST/JSON, SAP PS/MM/CO/SD, production debugging, performance engineering.

AI / Backend / Tools: Python, FastAPI, Pydantic, Ollama/local LLMs, Git, GitHub, VS Code, Eclipse/ADT, C#, SQL.

LANGUAGES

English: IELTS Academic in preparation; official test planned within 60 days. **Persian:** Native.
